25/35	23	35,7
30/40	28,5	41,2

Bi-metal contact thermometer for water heater, with bayonet fixture.

**BASE:** white Moplen; different colours on request.

**CAP:** sliding cap in aluminium (C).

**TRANSPARENT:** crystalline polystyrene.

**POINTER:** red or blue ABS; different colours on request.

**DIAL:** screenprinted on PVC; may be customised on request; examples of graphics are given below.

**MECHANISM:** bi-metal precision spiral.

**LEG:** for a correct temperature indication, once the thermometer is fitted, a perfect contact must be guaranteed between the sliding cap (C) and the internal boiler of the water heater; it is therefore important to choose from the different combinations shown in the table the one most suited for the insulating cavity wall of the water heater.

**FIXTURE:** bayonet; the perforating template (D) is the one most suitable for a correct fixture.
